

TABLE OF CONTENTS

EDZ WORKSHOP

	<u>Page</u>
Preface	1
The Excavation Damage Zone - An International Perspective - <i>C. Fairhurst, B. Damjanac University of Minnesota (USA)</i>	3
Study on Excavation Disturbance in the Kamaishi Mine, Japan - <i>K. Sugihara, H. Matsui, F. Ishijima, T. Sato, PNC (Japan)</i>	15
Connected Pathways in the EDZ and the Potential for Flow Along Tunnels - <i>N.A. Chandler, E.T. Kozak, AECL, C.D. Martin, GRC (Canada)</i>	25
Characterizing Excavation Damage in Highly-Stressed Granite at AECL's Underground Research Laboratory - <i>R.S. Read, AECL (Canada)</i>	35
Distribution of Seismic Wave Velocities Around Underground Drifts - <i>H.-J. Alheid, M. Knecht, Federal Institute for Geosciences and Natural Resources (Germany)</i>	47
The Excavation Disturbed Zone of the Experimental Full Scale Deposition Holes and Research Tunnel at Olkiluoto - <i>J. Autio, Saanio & Riekkola Oy Consulting Engineers (Finland)</i>	57
Mapping the Excavation Disturbed Zone Around the Mine-by Tunnel Using Induced Seismicity and Velocity Imaging - <i>S.C. Maxwell, R.P. Young, C. Baker, D.S. Collins, University of Keele (UK) C.D. Martin, GRC (Canada)</i>	67
Comparison of Excavation Disturbance Around Deep Tunnels in Hard Rock Using Acoustic Emission and Ultrasonic Velocity Methods Acoustic Emission and Ultrasonic Velocity Methods - <i>S.D. Falls, Queen's University (Canada), R.P. Young, University of Keele (UK)</i>	77
Disturbed Zone Assessment with Permeability Measurements in the ZEDEX Tunnel - <i>C. Bauer, F. Homand, Laboratoire de Geomecanique, K.B. Slimane ANDRA (France)</i>	87

Measurement of the Excavation Disturbed Zone in the ZEDEX project in the Context of Repository Post-Closure Performance Assessment - <i>D. Mellor, NIREX (UK), A. Cournut, ANDRA (France)</i>	97
Current Understanding of Extent and Properties of the Excavation Disturbed Zone and Its Dependence of Excavation Method - <i>O.L. Olsson, SKB, A. Winberg, Conterra AB, (Sweden)</i>	101
Micromechanics-based Models for Fracture and Breakout Around the Mine-by Tunnel - <i>P.A. Cundall, D.O. Potyondy, C.A. Lee, Itasca Consulting Group (USA)</i>	113
Modeling Excavation Response in Geological Repositories for Radioactive Waste Using Discontinuous Deformation Analysis Method - <i>C.T. Lin, S. Ouyang, C-T. Huang, Y-H. Su, Industrial Technology Research Institute, P.T.H. Huang, Taiwan Power Company (Taiwan)</i>	123
Estimating Rock Mass Deformation Modulus for Excavation Disturbed Zone Studies - <i>N. Barton, NGI (Norway)</i>	133
Incorporating the Excavation Disturbed Zone (EDZ), into the Design of the NIREX Rock Characterization Facility (RCF) - <i>D.W. Mellor, N. Davies, NIREX (UK)</i>	145
Designing an Effective EDZ Cutoff in High Stress Environments - <i>C.D. Martin, GRC, E.J. Dzik, R.S. Read, AECL (Canada)</i>	155
