

1995 CNS NUCLEAR SIMULATION SYMPOSIUM

TABLE OF CONTENTS

Session 1 - Reactor Physics-I

1. Comparison of Power Pulses from Homogeneous and Time-Average-Equivalent Models, by T.K. De and B. Rouben (AECL Mississauga).
2. Application of the Feedback Model for the History Base Using DRAGON, by T. Sissaoui and G. Marleau (École Polytechnique de Montréal).
3. Analysis of the Fast-Neutron Spectrum Inside the Experimental Cavity of the NRU Mk4 FN Rod, by Timothy C. Leung (AECL Chalk River).

Session 2 - Reactor Physics-II

1. Validation of Physics Model of FARE Tool by Comparison of RFSP Flux Simulations with Measurements at Discrete Refuelling Steps, by M.A. Shad (AECL Mississauga).
2. Change in CANDU-6 Reactivity Following a Power Reduction at Low PHT Purity, by J. Whitlock, M.R. Soulard (AECL Mississauga) and A. Baudouin (Hydro-Québec).
3. REFUEL: Automated Refuelling Program for CANDU Reactors, by A. Gray (AECL Mississauga).
4. The Reactor Physics Computer Programs in PC's Era, by O. Nainer and D. Serghiuta (Team 3 Solutions).

Session 3 - Reactor Physics-III

1. The Burnable Poisons Utilization for Fissile Enriched CANDU Fuel Bundle, by D. Serghiuta and O. Nainer (Team 3 Solutions).
2. The Application of the Goal Programming to CANDU Fuel Management Optimization, by D. Serghiuta and O. Nainer (Team 3 Solutions).
3. Sensitivity of ^{238}U Resonance Absorption to Library Multigroup Structure as Calculated by WIMS-AECL, by P.J. Laughton (AECL Chalk River) and J.V. Donnelly (AECL Mississauga).
4. Application of the DONJON Reactor Code for Regulating System Simulations, by E. Varin, J. Koclas and R. Roy (École Polytechnique de Montréal).

Session 4 - Hydrogen Behaviour

1. Hydrogen Distribution Studies Relevant to CANDU Containments, by M. Krause, D.R. Whitehouse, C.K. Chan and S.C.A. Jones (AECL Whiteshell).
2. Modelling of Hydrogen Deflagration in a Vented Vessel, by L. Wang and R.C. Wong (Ontario Hydro).
3. Cell Size Spatial Convergence Analysis on GOTHIC Distributed Parameter Models for Studying Hydrogen Mixing Behaviour in CANDU Containments, by K. Yim and R.C. Wong (Ontario Hydro).
4. Hydrogen Distribution Analysis for CANDU 6 Containment Using the GOTHIC Containment Analysis Code, by T.H. Nguyen and W.M. Collins (AECL Mississauga).

Session 5 - Thermalhydraulics-I

1. An Improved Methodology for Addressing Coolant Inlet Temperature Variations When Calculating NOP Trip Set-Points, by David Buchan (Ontario Hydro).
2. Gas Resolution and Released Models in Reactor Thermal-Hydraulics, by E. Zaltsgendler, W.S. Liu and R.K. Leung (Ontario Hydro).
3. Experimental and Numerical Study of Single-Phase Heat Transfer Enhancement in a Tube, by S. Doerffer, A.O. Banas and C.H. Wang (AECL Chalk River).
4. ASSERT Software Quality Assurance, Benchmark Testing and Parametric Studies, by J.C. Kiteley, M.B. Carver, G.M. Waddington and S.V. Junop (AECL Chalk River).

Session 6 - Thermalhydraulics-II

1. ASSERT Validation Against the Stern Laboratory Pressure Drop Tests, by G.M. Waddington, J.C. Kiteley and M.B. Carver (AECL Chalk River).
2. Prediction Methods to Account For The Effect of Pressure-Tube Diametral Creep On Critical Heat Flux and Pressure Drop For A37-Element Bundle String, by D.C. Groeneveld (AECL Chalk River) and G. Hotte (Hydro-Québec).
3. Detection of Damped Flow Oscillations in a CANDU 6 SOPHT Simulation using Noise Perturbations, by Y. Gao, H.W. Hinds, P. Tonner and P. Kumli (AECL Chalk River).
4. Some Aspects of Modelling CWIT Refill Test 1465 Using CATHENA, by P. Han, W. Thompson (Atlantic Nuclear Services Ltd.) And A. Galia (New Brunswick Power).

Session 7 - Reactor Safety and Operation-I

1. CANDU-9 Nuclear Power Plant Simulator, by Mahoud Kattan and Mike MacBeth (AECL Saskatoon) and Kwok Lam (CTI Toronto).
2. MAAP-CANDU Simulation of Severe Accidents in Darlington NGS, by M.H. Choi, M.T. Kwee, R.K. Leung and S.G. Lie (Ontario Hydro).
3. Fault Detection and Diagnosis Using Statistical Control Charts and Artificial Neural Networks, by R. Leger and W.J. Garland and W.F.S. Poehlman (McMaster University).
4. Rapid Assessment of Atmospheric Releases for Nuclear Emergency Response Planning, by R. De Wit, D. Spagnolo (Quanta Technologies Group Inc.) and S. Kupca (Department of National Defense).

Session 8 - Reactor Safety and Operation-II

1. Determination of Critical Break for Large Break Loss-of-Coolant Accident Analysis, by J.D. Hoskins and W. Chan (Ontario Hydro).
2. Large Break Loss-of-Coolant Accident Coincident with Loss of Class IV Power Analysis, by P. Ta and W. Chan (Ontario Hydro).
3. Darlington NGS Reactor Operation with Flux Tilt Impact on Neutron Overpower Protection, by A.H. Oslinger and E.A. Attia (Ontario Hydro).
4. In Core LOCA-s: Analytical Solution for the Delayed Mixing Model for Moderator Poison Concentration, by A.P. Firla (Ontario Hydro).
