www.cns-snc.ca

President's Message

Dear fellow CNS members,

Welcome to the first issue of the CNS Bulletin for 2023! I would like to start this editorial by thanking all of the CNS volunteers who have been working hard to make this year's conference and other events a success. Without your dedication and hard work, the CNS would not be able to provide the high-quality events and publications that our members have come to expect. Thank you for your commitment to the CNS and to the nuclear industry in Canada.

Speaking of the conference, I had the pleasure of attending the 42nd Annual Conference and Nuclear Simultaneous Translation Symposium in Toronto, Ontario, from June 4 to 7. It was a great opportunity to network with colleagues from across the country and to learn about the latest developments in the nuclear industry. I would like to congratulate the conference organizers for putting together such a successful event.

I also had the opportunity to attend the Canadian Nuclear Association (CNA) Conference in Ottawa, Ontario, from June 12 to 14. The CNA conference is a great opportunity for the nuclear industry to come together and discuss the challenges and opportunities facing the industry. I would like to congratulate the CNA for organizing such a successful event.

I am looking forward to seeing you all at the upcoming CNS events. The next issue of the CNS Bulletin will be published in September, and I will be sure to include a report on the CNS Annual General Meeting in that issue.

Thank you for your continued support of the CNS.

Sincerely,

Adam Gilmour

Recent and Upcoming Events

From Chairs, an ICC conference

During the week of May 14, 2023, the Canadian Nuclear Society (CNS) hosted the 42nd Annual Conference and Nuclear Simultaneous Translation Symposium (NSTS) at the Toronto Marriott Downtown Eaton Centre Hotel. The conference included a variety of technical sessions, plenary sessions, and networking events. The CNS Conference Committee was responsible for organizing the conference, and they did a great job of bringing together a diverse group of speakers and attendees. The conference was a success, and it provided a valuable opportunity for the nuclear community to share knowledge and network.

Summer School

It is the mission of Canada's Nuclear Innovation Network (Canada's Nuclear Innovation Network) to provide a forum for students and young professionals to learn about nuclear energy and to network with each other. The Summer School is a great way to achieve this mission, and it is a valuable opportunity for students and young professionals to learn about the latest developments in the nuclear industry.

Canadian Workshop on Fusion Energy Science and Technology (CWFEST) 2023

Hosted at McMaster University

The Canadian Workshop on Fusion Energy Science and Technology (CWFEST) 2023 will be held at McMaster University in Hamilton, Ontario, Canada, from October 18 to 20, 2023. The workshop will bring together researchers from academia, industry, and government to discuss the latest developments in fusion energy science and technology.

Canadian Workshop on Fusion Energy Science and Technology (CWFEST) 2023

CWFEST 2023: Innovation Unleashed

Dear Colleagues,

We are excited to announce the Canadian Workshop on Fusion Energy Science and Technology (CWFEST) 2023, which will be held at McMaster University in Hamilton, Ontario, Canada, from October 18 to 20, 2023. The workshop will bring together researchers from academia, industry, and government to discuss the latest developments in fusion energy science and technology.

Deadline for submissions is September 15, 2023

Where can I find more information on CWFEST 2023?

Visit the official CWFEST 2023 website at [insert website URL]

Thank you

Canadian Workshop on Fusion Energy Science and Technology

The 21st International Conference on Fusion Science and Engineering Physics and Nuclear Power Systems - Make Reactors

Dear CNS Members, Sponsors, and Colleagues from the Nuclear Industry, We are pleased to announce the 21st International Conference on Fusion Science and Engineering Physics and Nuclear Power Systems - Make Reactors. The conference will be held in Toronto, Ontario, Canada, from October 18 to 20, 2023. The conference will bring together researchers from academia, industry, and government to discuss the latest developments in fusion science and engineering physics and nuclear power systems.

The conference will feature a variety of technical sessions, plenary sessions, and networking events. The technical sessions will cover a wide range of topics, including fusion plasma physics, fusion engineering, nuclear power systems, and nuclear safety. The plenary sessions will feature keynote speakers from industry and government. The networking events will provide an opportunity for attendees to meet and network with each other.

We invite you to submit abstracts for technical sessions. The deadline for abstract submission is September 15, 2023. We also invite you to participate in the conference as a sponsor or exhibitor. For more information, please visit the conference website at [insert website URL].

We look forward to seeing you in Toronto. Yours Sincerely, Anna Tidona, Chairman, Make Reactors, Make Energy

Core Business Blog

by Paul Thorpedon

Since the start date of 01 June, I have been settling into the role of Director, Operations. I would like to thank Chris Mancini for his support during the transition period. Chris has been a great mentor and has helped me to get up to speed on the many challenges facing the nuclear industry in Canada.

One of the first things I did in my new role was to attend the Canadian Nuclear Association (CNA) Conference in Ottawa, Ontario, from June 12 to 14. The CNA conference is a great opportunity for the nuclear industry to come together and discuss the challenges and opportunities facing the industry. I would like to congratulate the CNA for organizing such a successful event.

I also had the opportunity to attend the Canadian Nuclear Society (CNS) Conference in Toronto, Ontario, from June 4 to 7. It was a great opportunity to network with colleagues from across the country and to learn about the latest developments in the nuclear industry. I would like to congratulate the CNS Conference Committee for organizing such a successful event.

I am looking forward to seeing you all at the upcoming CNS events. The next issue of the CNS Bulletin will be published in September, and I will be sure to include a report on the CNS Annual General Meeting in that issue.

Thank you for your continued support of the CNS.

Sincerely,

Paul Thorpedon

1. Introduction

Small modular reactors (SMRs) are a new type of nuclear reactor that is smaller and more flexible than traditional nuclear reactors. SMRs can be built in factories and then transported to their final location, which can reduce the cost and time of construction. SMRs can also be used to provide power to remote communities or to industrial facilities.

2. Small Modular Reactors and Nuclear Power

SMRs are a type of nuclear reactor that is smaller and more flexible than traditional nuclear reactors. SMRs can be built in factories and then transported to their final location, which can reduce the cost and time of construction. SMRs can also be used to provide power to remote communities or to industrial facilities.

3. Why Should We Build Small Modular Reactors in Canada?

3.1 Small Modular Reactors Can Help Us Reduce Greenhouse Gas Emissions

SMRs can help us reduce greenhouse gas emissions by providing a clean source of energy. SMRs can also be used to replace fossil fuel power plants, which can help us to meet our climate change goals.

3.2 Small Modular Reactors Can Help Us Create Jobs and Economic Growth

SMRs can help us create jobs and economic growth by providing a new source of energy. SMRs can also be used to export nuclear technology to other countries.

3.3 Small Modular Reactors Can Help Us Improve Our Energy Security

SMRs can help us improve our energy security by providing a reliable source of energy. SMRs can also be used to reduce our dependence on imported energy.

3.4 Small Modular Reactors Can Help Us Export Nuclear Technology

SMRs can help us export nuclear technology to other countries. SMRs can also be used to help other countries to meet their climate change goals.

4. Small Modular Reactors in Canada

4.1 Small Modular Reactor Projects in Canada

There are several small modular reactor projects in Canada. These projects are at different stages of development.

4.2 Challenges to the Deployment of Small Modular Reactors in Canada

There are several challenges to the deployment of small modular reactors in Canada. These challenges include the cost of construction, the regulatory framework, and the public acceptance of nuclear power.

5. Small Modular Reactors and Nuclear Waste Management

5.1 Nuclear Waste Management Challenges

Nuclear waste management is a challenge for all nuclear reactors. SMRs can help us to reduce the amount of nuclear waste that we produce.

5.2 Small Modular Reactors and Nuclear Waste Management

SMRs can help us to reduce the amount of nuclear waste that we produce. SMRs can also be used to recycle nuclear waste.

5.3 Advanced Nuclear Fuel Cycles and Small Modular Reactors

Advanced nuclear fuel cycles can help us to reduce the amount of nuclear waste that we produce. SMRs can be used with advanced nuclear fuel cycles.

5.4 Deep Geological Repositories and Small Modular Reactors

Deep geological repositories are a safe way to store nuclear waste. SMRs can be used with deep geological repositories.

6. Small Modular Reactors and Nuclear Safety

6.1 Nuclear Safety Challenges

Nuclear safety is a challenge for all nuclear reactors. SMRs can help us to improve the safety of nuclear power.

6.2 Small Modular Reactors and Nuclear Safety

SMRs can help us to improve the safety of nuclear power. SMRs can also be used to reduce the risk of nuclear accidents.

6.3 Passive Safety Systems and Small Modular Reactors

Passive safety systems can help us to improve the safety of nuclear power. SMRs can be used with passive safety systems.

6.4 Emergency Planning and Small Modular Reactors

Emergency planning is important for all nuclear reactors. SMRs can help us to improve emergency planning.

7. Small Modular Reactors and Public Acceptance

7.1 Public Acceptance Challenges

Public acceptance is a challenge for all nuclear reactors. SMRs can help us to improve public acceptance of nuclear power.

7.2 Small Modular Reactors and Public Acceptance

SMRs can help us to improve public acceptance of nuclear power. SMRs can also be used to reduce the risk of nuclear accidents.

7.3 Engaging the Public and Small Modular Reactors

Engaging the public is important for all nuclear reactors. SMRs can help us to improve public engagement.

8. Small Modular Reactors and Economic Development

8.1 Economic Development Challenges

Economic development is a challenge for all nuclear reactors. SMRs can help us to improve economic development.

8.2 Small Modular Reactors and Economic Development

SMRs can help us to improve economic development. SMRs can also be used to create jobs and economic growth.

8.3 Small Modular Reactors and Job Creation

SMRs can help us to create jobs and economic growth. SMRs can also be used to export nuclear technology to other countries.

8.4 Small Modular Reactors and Export Opportunities

SMRs can help us to export nuclear technology to other countries. SMRs can also be used to help other countries to meet their climate change goals.

9. Small Modular Reactors and International Cooperation

9.1 International Cooperation Challenges

International cooperation is a challenge for all nuclear reactors. SMRs can help us to improve international cooperation.

9.2 Small Modular Reactors and International Cooperation

SMRs can help us to improve international cooperation. SMRs can also be used to reduce the risk of nuclear accidents.

9.3 International Collaboration and Small Modular Reactors

International collaboration is important for all nuclear reactors. SMRs can help us to improve international collaboration.

9.4 International Standards and Small Modular Reactors

International standards are important for all nuclear reactors. SMRs can help us to improve international standards.

10. Conclusion

Small modular reactors (SMRs) are a new type of nuclear reactor that is smaller and more flexible than traditional nuclear reactors. SMRs can be built in factories and then transported to their final location, which can reduce the cost and time of construction. SMRs can also be used to provide power to remote communities or to industrial facilities.

SMRs can help us reduce greenhouse gas emissions by providing a clean source of energy. SMRs can also be used to replace fossil fuel power plants, which can help us to meet our climate change goals.

The recipient of our 2023 Pioneers for Change Alumni Award is...

Dr. Mehrdad Grover

Dr. Mehrdad Grover is a leading expert in the field of nuclear engineering. He has made significant contributions to the development of new nuclear technologies, and his work has had a major impact on the industry. Dr. Grover is a passionate advocate for nuclear energy, and he is committed to using his knowledge and expertise to help address the challenges facing the world today.

Congratulations Dr. Grover!

Dear All Members,

The Canadian Nuclear Society would like to thank everyone who submitted nominations for the 2023 Pioneers for Change Alumni Award. We received a number of excellent nominations, and it was a difficult decision to choose a winner.

The Selection Committee was comprised of:

- Chair/Secretary: Dr. Jeremy Whitman (Canadian Nuclear Society)
- Member: Dr. Mehrdad Grover (Canadian Nuclear Society)
- Member: Dr. Anna Tidona (Make Reactors)
- Member: Dr. Nishant Sharma (Canadian Nuclear Society)
- Member: Dr. Paul Thorpedon (Canadian Nuclear Society)
- Non-Member: Dr. Jeremy Whitman (Canadian Nuclear Society)

The Selection Committee would like to thank everyone who submitted nominations for the 2023 Pioneers for Change Alumni Award. We received a number of excellent nominations, and it was a difficult decision to choose a winner.

HELGI "VERN" AUSTMANN (1930 - 2023)

It is with sadness that the Canadian Nuclear Society (CNS) announces the passing of Helgi "Vern" Austmann on Thursday, May 25, 2023, 2023, 93 in Toronto, Ontario, Canada. He was a member of the CNS for over 50 years.

Vern was born in Winnipeg, Manitoba, Canada, on May 25, 1930. He graduated from the University of Manitoba with a degree in electrical engineering in 1952. He then worked for the Canadian National Railways for 10 years before joining the Canadian Nuclear Association (CNA) in 1962. He was a pioneer in the development of nuclear power in Canada and was instrumental in the design and construction of the first nuclear power plant in Canada, the Douglas Point Nuclear Generating Station.

Vern was also a leader in the CNS. He served as president of the CNS from 1978 to 1979 and was a member of the CNS Board of Directors for many years. He was awarded the CNS Fellowship in 1980 and the CNS Honorary Membership in 1990.

Vern is survived by his wife, Helga, and their children, Elizabeth and Peter. Funeral arrangements are pending.

The Canadian Nuclear Society extends its sympathy to Vern's family and friends.

Dr. Derek H. Lister, O.Eng., Professor Emeritus, Member of the Order of Canada (1938 - 2023)

It is with great sadness that we announce the passing of Dr. Derek H. Lister, O.Eng., Professor Emeritus, Member of the Order of Canada, on June 10, 2023, at the age of 85.

Dr. Lister was a pioneer in the field of nuclear engineering and a leading advocate for nuclear energy in Canada. He was born in Toronto, Ontario, in 1938 and graduated from the University of Toronto with a degree in engineering physics in 1960. He then went on to earn a master's degree and a doctorate in nuclear engineering from the University of Illinois at Urbana-Champaign.

Dr. Lister began his career at the Atomic Energy of Canada Limited (AECL) in 1964. He worked on the development of the CANDU reactor, which is Canada's unique nuclear power plant design. He was also involved in the construction of the first CANDU reactor, the Douglas Point Nuclear Generating Station.

In 1976, Dr. Lister left AECL to become a professor of nuclear engineering at the University of Toronto. He taught there for over 30 years and was a mentor to many students who went on to successful careers in the nuclear industry.

Dr. Lister was a strong advocate for nuclear energy and was a frequent speaker at conferences and public events. He was also a member of the Canadian Nuclear Society (CNS) and served as its president in 1982-1983.

Dr. Lister was awarded the Order of Canada in 1995 for his contributions to nuclear engineering and his advocacy for nuclear energy. He was also awarded the CNS Fellowship in 1980 and the CNS Honorary Membership in 1990.

Dr. Lister is survived by his wife, Elizabeth, and their children, Elizabeth and Peter. Funeral arrangements are pending.

The Canadian Nuclear Society extends its sympathy to Dr. Lister's family and friends.
